

ScanRobot ® 2.0 MDS je systém s vysokou rychlostí hromadného digitalizace (MDS) určené pro velké množství digitalizace ve vázané formě. Jeho jedinečné a patentované technologie vytváří naprosto nerušené a čisté snímky a zaručuje rychlou a nákladově efektivní digitalizaci.

The award-winning product, made by Treventus/Austria, is the leading product in the robotic book scanning market and combines the following advantages:

- The scanner is incapable of tearing pages (unlike other robotic scanners)
- No mechanical parts involved to flip the page
- Few movable parts only
- Stepless book holder from 60 - 100 degrees
- Short setup time (about 1 minute only)
- Capable of handling extremely small books
- Images are being cleaned up on the fly (contrast, cropping, deskewing, etc.), no need to touch them again
- Capable of scanning wavy pages
- Produces distortion free images due to unique prism
- Optical resolution is applied on the entire scanning range

- No glass plate involved
- No maintenance-prone shutter involved (as in scanners based on digital cameras)
- Produces homogeneous images due to a single scan optic
